Summary

Versatile QA and Automation Engineer with 10+ years of experience spanning both Quality Assurance and Software Engineering. Skilled in designing end-to-end automation suites using Playwright, Selenium, and Postman for UI, API, and SQL database validation. Language-agnostic professional with hands-on experience in JavaScript, Java, Python, and C#, and a demonstrated capacity to rapidly adopt new tech stacks.

Work Experience

Crown Castle (Oct 2023 - Feb 2026)

QE Engineer II, October 2023 - February 2026 (Fully Remote)

- Owned the full testing lifecycle as the sole QE on multiple Agile teams developing in-house GIS web/desktop apps
- Engineered and scaled an automation suite of 100+ Playwright (JS) tests integrated into Harness CI/CD pipelines, monitored daily via Datadog dashboard, tests covered UI, API, and SQL database validation
- Architected a robust API regression suite of 1,000+ tests in Postman Enterprise that executed in minutes, providing immediate confidence in code stability before production deployments
- Accelerated test velocity using GitHub Copilot for rapid automated test development
- Designed and prioritized hundreds of test cases in QMetry including smoke, regression, P1-P4 to ensure release stability
- Partnered with Developers and PMs to influence product quality from inception, reviewed developer code frequently to identify edge cases missed, consulted with end users to align automation with real-world workflows
- Led a critical divestiture effort to cleanse, separate, and migrate GIS test assets during a corporate sell-off

Solers/Peraton (Jun 2015 - Oct 2023)

Test Engineer, September 2020 - October 2023 (Hybrid, Arlington, VA)

- Designed and implemented 1,000+ automated UI regression tests from scratch using Selenium (C#) and Visual Studio, covering complex multi-user roles across the entire application
- Performed critical smoke testing to ensure zero-defect deployments for 30+ production deployments
- Tested countless stories and bugs, documenting detailed test execution steps and results within TFS/Azure DevOps
- Documented over 100 high-priority defects found during manual, automated, and exploratory testing
- Executed API validation using Swagger, validated logs in Splunk

Software Engineer/Team Lead/Scrum Master, June 2015 - September 2020 (Hybrid, Arlington, VA)

- Maintained and added to preexisting Selenium automated test suite (Java) containing hundreds of UI tests for web application, monitored results daily, mastered creation of XPath's
- Became team lead and scrum master in 2020, led team of 5-10 members over 7+ months, including running sprint ceremonies, assisting team members, and conducting code reviews
- Completed back-end Java developer tickets, including creating and maintaining Unit Tests using JUnit
- Assisted the test team with regression testing before every release

Personal Projects

Portfolio Site: <https://ddutil.dev> (Feb 2026 - Present)

- Stack: Next.js, Tailwind CSS, Playwright, GitHub Actions, NeonDB (Postgres), PostHog
- Engineered a high-performance portfolio site with a fully responsive layout optimized for both desktop and mobile
- Created Playwright automation framework that runs 61 tests against my site, including UI, API, and DB tests, with results persisted to NeonDB for historical performance tracking
- Architected a CI/CD pipeline via GitHub Actions that executes tests on every code push and daily scheduled runs
- Built a custom contact form backed by Resend for email delivery and Upstash Redis for rate limiting to prevent spam
- Leveraged GitHub Copilot throughout development for code refactoring and problem-solving
- Invested significant effort in UI/UX design, iterating on layout, typography, and spacing across screen sizes
- Integrated PostHog for product analytics to track real user behavior and page engagement
- Open-source on GitHub — built as a living portfolio and personal playground for experimenting with modern web technologies
- GitHub links: https://github.com/ddutil/personal_website, https://github.com/ddutil/portfolio_tests

Skills

- Languages: Java, JavaScript, TypeScript, C#, Python, SQL
- Automated Testing: Playwright, Selenium Webdriver, Postman Enterprise
- Cloud & DevOps: Git, GitHub, AWS, Harness, Jenkins
- SDLC & Test Management: Jira, Azure DevOps, QMetry, Agile/Scrum
- Other Tools: GitHub Copilot, Swagger, Datadog

Education and Certifications

- Bachelor of Science in Computer Science, University of Maryland, College Park
- AWS Certified Cloud Practitioner, Amazon Web Services
